

Comtrend CT-5072T Installation Guide

NOTE: Modem does not have wireless capabilities on its own

Front Panel View:

Back Panel View:

• Plug power supply in

• This is where you can plug in a PC device or a router, plugging in a router can expand the network for more devices and give wireless capabilities

• Any phone device such as an answering machine, has to be plugged into a separate filter on the phone symbol side
• If there is only a modem on the one wall jack and no phone, then the filter is not needed

• Modem plugs into the LEFT side of the filter (says DSL)
• Phone plugs into RIGHT side of the filter (says "phone" with phone symbol)
